

Course : Python

- Seaborn
- Matplotlib
- Numpy
- Pandas
- Keras
- Tensorflow
- Sci-kit Learn
- Pytorch
- Scipy

Course : Machine Learning

- Linear Regression
- Logistic Regression
- Classification Algorithms
- Clustering Algorithms
- Decision Tree
- Random Forest
- Statistical Algorithms
- Probability Distributions

Course : NLP (Natural Language Processing)

- Tokenization
 - Word Tokenization
 - Sentence Tokenization
- Part-Of-Speech (POS)
- POS Tagging
- NER (Named Entity Recognition)
- Text Classification
- Naive Bayes Classifier
- SVM (Support Vector Machine)
- Lexicon-Based Approaches: Assigns sentiment scores to words and calculates an overall sentiment for a text based on these scores.
- Named Entity Disambiguation
- Word Sense Disambiguation (WSD) : Determines the correct sense of a word with multiple meanings based on context.
- Machine Translation

- SMT (Statistical Machine Translation) : Translates text based on statistical models learned from bilingual corpora
- NMT (Neural Machine Translation) : Use neural network for translation and often used for sequence- to-sequence models.
- Information Retrieval and Extraction
- TF-IDF (Term Frequency-Inverse Document Frequency)
- NEL (Named Entity Linking)
- Coreference Resolution
- Speech Recognition
- HMM (Hidden Markov Models)
- Syntax and Grammar Parsing
- Dependency Parsing
- SRL (Semantic Role Labeling)
- Word Embeddings
- Word2Vec
- GloVe (Global Vectors For Word Representation)
- Pre-Trained Language Models
- GPT (Generative Pre-Trained Transformer)
- BERT (Bidirectional Encoder Representation from Transformers)
- Attention Mechanism
- Text Generation
- RNN (Recurrent Neural Networks)
- CVAE (Conditional Variational Autoencoders)
- Question Answering Models
- Conversational Agents
- Rule Based System
- Seq2Seq Models
- Sentiment Analysis
- Machine Translation
- Multilingual Models
- XML-R
- mBERT
- Siri
- Alexa
- Google Assistant
